Webcam Instructions

1. Run the Python script to open the webcam (Python programming web requests cannot open external webcam).
2. Hold your QR code in front of the webcam.
3. Ensure the QR code is visible and aligned.
4. The system will automatically scan and record the QR code.

Project Description

This project is designed to take down employees' attendance using a QR code. Every employee will have a card that contains a unique QR code representing their ID. Employees scan their card in front of a webcam upon arrival, and the system notes down their attendance, including the date and time. The system stores all the employees' attendance records and generates overall attendance reports in an Excel sheet for the admin. It also allows the admin to search for specific employees' attendance.

Admin Dashboard

Total Employees

4 Employees

Shows the total number of registered employees, including verified and pending verification employees.

Verified Employees

4 Verified

Displays the number of employees who have been verified and are active in the system.

Pending Verifications

0 Pending

Lists employees who have registered but are awaiting verification. Admin can review and approve these accounts.

My Profile

Access your profile details including personal information and account settings. You can update details as needed.

Go to Profile

Manage Employees

View and manage employee accounts. Admin can filter by verified or pending employees, verify pending accounts, and update employee details.

Manage Employees

Generate Attendance Reports

Generate detailed reports of employee attendance records for analysis. These reports can be filtered by date, department, and status.

Logout

Securely log out of the admin dashboard to end your session.
